     Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                         Score

AL Submitted (19-NOV-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
On Nov 19, 2002 this sequence version replaced gi:23322544.
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome spatial and the contigs within a contigs will be indicated in the feature
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Milosavijevic, A., Minder,G., Minda,E., Montemayor, J., Moore,S., Milosavijevic,A., Minder,G., Munidasa,M., Murphy,M., Nair,L., Morgan,M., Morris,K., Morris,S., Munidasa,M., Murphy,M., Nair,L., Namkervis,C., Neal,D., Newton,N., Nguyen,N., Norris,S., Parks,K., Naokelemeh,O., Okwuonu,G., Olarnpunsagoon,A., Pal,S., Parks,K., Pasternak,S., Paul,H., Perez,A., Perez,L., Pfannkoch,C., Plopper,F., Poindexter,A., Popovic,D., Primus,E., Pul,-L., Plopper,F., Poindexter,A., Popovic,D., Primus,E., Pul,-L., Plopper,F., Roindexter,A., Popovic,D., Primus,E., Pul,-L., Plopper,F., Roindexter,A., Reeves,K., Regter,M.A., Reigh,R., Reilly,M., Ren,Y., Reuter,M., Richards,S., Riggs,F., Rives,C., Rodkey,T., Rojas,A., Rose,M., Rose,R., Ruiz,S.J., Sanders,W., Savery,G., Scherer,S., Scott,G., Shatsman,S., Shen,H., Shetty,J., Shvartsbeyn,A., Sisson,I., Sitter,C.D., Smajs,D., Shetty,J., Shvartsbeyn,A., Sisson,I., Sitter,C.D., Smajs,D., Shetty,J., Strong,R., Sutton,A., Svatek,A., Tabor,P., Taylor,C., Taylor,T., Thomas,N., Thomas,S., Tingey,A., Trejos,Z., Usmani,K., Valas,R., Vera,V., Villasana,D., Waldron,L., Walker,B., Wang,J., Wang,O., Wang,S., Warren,J., Warren,R., Wei,X., White,F., Wang,O., Wang,S., Warren,J., Warren,R., Wei,X., Yoon,L., Yoon,V., Yu,F., Zhang,J., Zhou,J., Zhou,X., Zhoo,S., Dunn,D., von,V., Weinstock,G. and Gibbs,R.A.

Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  314034

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature
                           * NOTE: Estimated insert size may differ from sequence length

COMMENT

NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).

NOTE: This is a 'working draft' sequence. It currently consists of 64 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will Consensus quality: 98530 bases at least Q40 Consensus quality: 105678 bases at least Q30 Consensus quality: 110755 bases at least Q20 Estimated insert size: 86014; sum-of-contigs estimation Quality coverage: 1x in Q20 bases; sum-of-contigs estimation

as soon as it be preserved.

CC The present sequence is that of the cis-acting regulatory region of the CC murine Ang-2 gene located 5' to the start of transcription. This ciscacting DNA regulates preferential expression in endothelial muscle cells of a polypeptide-encoding DNA to which it is operably linked. The CC invention provides compositions that include a polynucleotide encoding a creporter gene (e.g. a light-generating moiety), a polynucleotide encoding a creporter gene (e.g. a light-generating moiety), a polynucleotide encoding composition is a selectable marker (e.g. an antibiotic) and optionally a regulatory composition of provide encoding a composition is a polynucleotide encoding a composition in the ability to effect transcription of operably linked composition is used for imaging composition in endothelial cells). The composition is used for imaging composition is need to provide a portion of case to be cells. The cells may be healthy cells or tumour cells, in which case composition is used for imaging composition of provided by composition of provided by composition of provided by composition of provided are vectors comprising the polynucleotides, cells (e.g. primary cells, cells from established cell lines, or tumour cells) comprising the production. The transgenic animals are used in methods for their cell dentification of a compound capable of modulating angiogenesis or which can be continued to be composed to the cells in methods for the cell dentification of a compound capable of modulating angiogenesis or which can be continued to pathway.
